

37. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

The differences between gigantic supermarket strawberries and tiny wild ones arose initially from natural variation among the wild plants themselves.

- (A) But whether the selection of wild edible plants by ancient hikers relied on conscious or unconscious criteria, the resulting evolution of wild plants into crops was at first an unconscious process. It followed inevitably from competition among plant individuals in gardens favoring individuals different from those favored in the wild.
- (B) Some of it, such as the variation in berry size or in nut bitterness, would have been readily noticed by ancient farmers. Other variation, such as that in seed dispersal mechanisms or seed dormancy, would have gone unrecognized by humans before the rise of modern botany.
- (C) That's why, in his great book *On the Origin of Species*, Darwin's first chapter is a lengthy account of how our domesticated plants and animals arose through artificial selection by humans. Rather than discussing the Galapagos Island birds, Darwin began by discussing how farmers develop varieties of gooseberries!
