One of the most celebrated political images in modern times is that of Soviet Premier Nikita Khrushchev ①pounded his shoe on the podium while delivering a speech at the United Nations in 1960. Everyone interpreted his histrionics as a tactic ②aimed at threatening the West; a man who would pound his shoe one moment might use his nuclear weapons the next! Thirty years later, Khrushchev's son Sergei explained his father had had something far different in mind. Khrushchev, who had rarely been outside the Soviet Union, had heard that people in the West ③loved passionate political debate. So he gave his audience ④what he thought they wanted — he pounded his shoe to make his point. When people were shocked, no one was more surprised than Khrushchev himself. He had just been trying to look like one of the guys. ⑤What became the very image of the irrational Russian was apparently the result of a simple cross-cultural misunderstanding.

You don't have to be a cardiologist to know what you *should* eat, or at least that a diet of candy and pizza is problematic. But this is precisely why that CCU on-call room is so illuminating. Cardiologists see with their own eyes and hold in their very hands the diseased body parts that come from eating poorly. Putting aside the CCU interns' and residents' youthful sense of invulnerability, a junk-food-eating cardiologist seems like _____. Such a person is a living example of the cognitive disconnect between intention and consumption. We consume the dietary weapons of mass destruction even when all our training and experience tell us not to. A survey of almost 300,000 U.S. physicians conducted in 2012 revealed that 34 percent of cardiologists report being overweight, with 4 percent actually obese. Forces beyond knowledge and free will are clearly at play when we eat.

- ① a therapeutic expert
- ② a medical contradiction
- ③ a healing magician
- ④ a prototype of a doctor
- ⑤ a real blackmailer

If authorities have short hair, then long hair is a symbol of opposition to that authority.

If authority is represented by a series of symbols, opposition to that authority is symbolically represented by an inversion of those symbols. (①) In the 1960s in the United States, all men in authority had short hair. (②) Young men created a symbol of opposition when they allowed their hair to grow long. (③) However, today, wearing one's hair long is acceptable. (④) Long hair is no longer considered a symbol of opposition to society, but dyeing one's hair fuchsia, blue, or orange is. (⑤) During the seventeenth century, the Cavaliers of Charles I of England wore their hair long, while those who opposed them, the Puritans led by Oliver Cromwell, wore short hair. The Puritans' hairstyle became the focal symbol of their opposition, and so they were called Roundheads (as depicted in a cartoon of the period).

In doing fieldwork, the anthropologist often finds that some of his best interviews are the result of chance encounters. ____ (A) ____, one of my colleagues had the experience of walking down the road to the village post office, not intending to meet anyone or discuss anything in particular. But, on the way, he saw an old man gathering stones from his yard and arranging them in patterns in his doorway. Stopping to say hello, the anthropologist asked what the old man was doing. He learned that the stones were meant to keep demons out of the house. This was important because his daughter-in-law had just gone into labor, and newborn babies are especially susceptible to any wandering demons who might be sent out by magicians in the employ of the family's enemies. ____ (B) ____, in this chance meeting, the anthropologist learned something about certain myths and rituals, about family relationships, and about the network of factions in the village.

How can children learn to focus their attention on something longer than a text message and more challenging than a YouTube video? The usual advice is to get them reading books, and we're only too happy to support that. ____ (A) ____ they can also work on attention by playing the right kinds of games, starting well before they're old enough to read. Some of the most successful recent self-control programs have drawn on the classic experiments of the Russian psychologist Lev Vygotsky, who used play to improve children's skills at certain tasks. The children in the experiments generally couldn't stand still for a long time, but their endurance increased if they pretended to be guards on watch. ____ (B) ____, they had a much easier time memorizing a list of words if they pretended they were going to a store and had to remember a list of things to buy.

(A)

- ① In other words
- ② In other words
- ③ Thus
- ④ However
- ⑤ However

(B)

- Similarly
- For example
- On the other hand
- Similarly
- For example

He is also credited with constructing the first grid system for cartographic representation, a major achievement in that it established a means for accurately determining both distance and direction from a map.

The ancient Greeks were the first culture to develop scientific techniques for making accurate maps. (①) Two Greek scholars have a particular importance in the history of cartography: Eratosthenes and Ptolemy. (②) Although they lived approximately three centuries apart, both men played a vital role in advancing cartographic techniques that would pave the way for much more accurate and detailed maps. (③) Eratosthenes, using the principles of geometry, derived a highly accurate measurement of the earth's size. (④) Ptolemy modified the grid system of Eratosthenes and offered his own calculation of the earth's circumference, although ironically, his estimation contained a much greater error than that of his predecessor. (⑤) His coordinate system, however, provided the basis for the modern application of latitude and longitude.
